

This is the AD architecture of the hierarchy for this lab. We're only migrating the Departments and Management OU for this project from AD on prem to M365.

Architecture

│   └─ ServiceAccounts
```

Lab step: After creating a new dedicated scoped-down **service AD Account** for ongoing sync process, rather than using Domain credentials persistently. This account is a new permanent ID that sync engine uses every single time it runs after configured once. We can setup a recurring schedule for this as well to run (default every 30 seconds) or for as long as the server exists.

Microsoft Entra sign-in configuration

To sign-in to Azure with the same credentials as your on-premises directory, a matching Microsoft Entra ID Domain is required. The following table lists the UPN suffixes for your on-premises environment and the status of the associated Microsoft Entra Domain. ?

Active Directory UPN Suffix	Microsoft Entra ID Domain
pslabpractice.com	Not Added ?

Select the on-premises attribute to use as the Microsoft Entra ID username

USER PRINCIPAL NAME ?

userPrincipalName

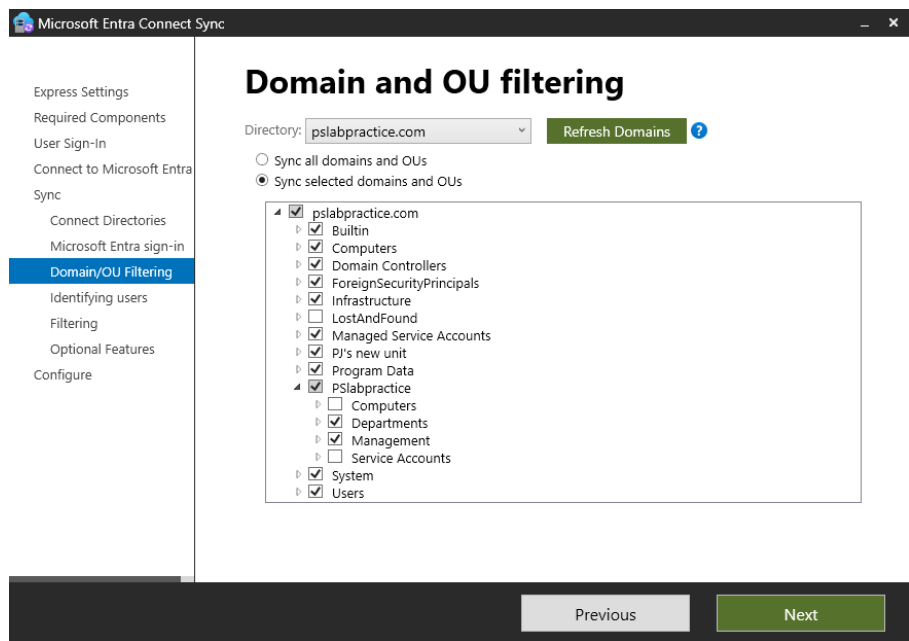

☐ Continue without matching all UPN suffixes to verified domains

Users will not be able to sign-in to Microsoft Entra ID with on-premises credentials if the UPN suffix does not match a verified domain. [Learn more](#)

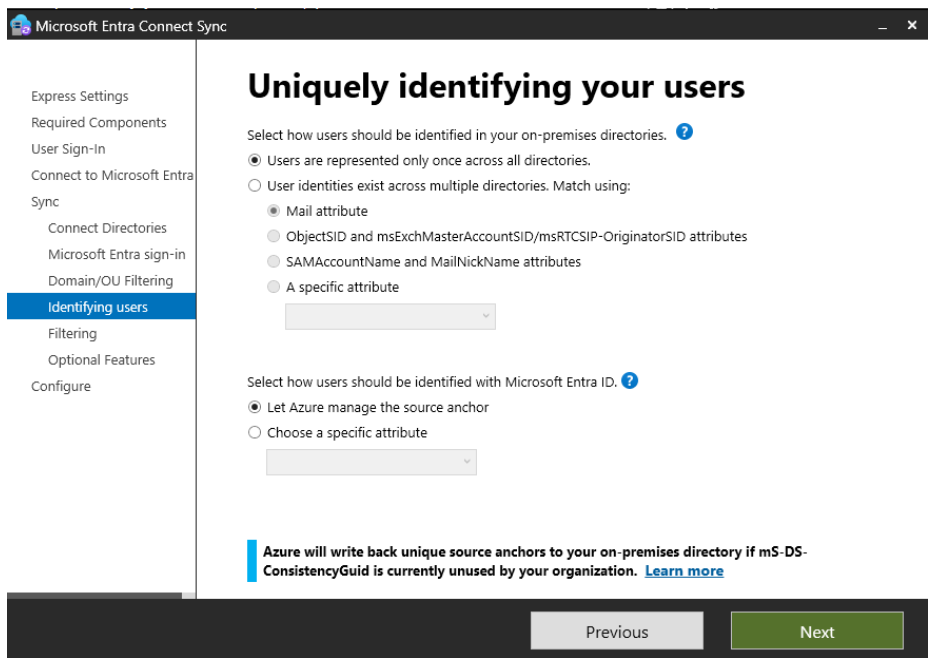

Previous Next

For this lab, I unchecked the option for **“Continue without matching all UPN suffixes to verified domains”**. Since this is for demonstration purposes, we're not going to use the same public domain for my on-prem server as that would require me to register that with a public DNS to verify that I own the domain. I kept the

scope of the lab limited to that and won't be matching all the UPN suffixes to verified domains. The Entra ID for the same user may be seen with a different UPN than on premises.

For the purpose of this lab, I only selected Departments and Management to sync to the cloud. There was no requirement to sync the entire domain and its components for this lab and to keep things simple and clean, I only picked these two **OU's**.

In this case, I only have one AD source and a single forest, and not multiple separate On-prem AD forests that are feeding into the same Entra tenant. I didn't have to figure out how to match/de-duplicate the identities across them, so I left this as default. I am also letting Azure to create and manage the **source anchor** automatically.

Extra filter – group-based filtering. Not required to be configured for this lab.
